A19 Parmeshwer Nagar, Opp Bhagwati Nagar, Near Hatkeshwer, Amraiwadi, Ahmedabad, Gujarat

ML Engineer

Aspiring Machine Learning Engineer with strong foundations in Python programming, data analysis, and model development. Skilled in building and deploying predictive models for real-world applications. Experienced in experiment tracking with MLflow and committed to building reproducible, scalable solutions. Seeking to contribute technical knowledge and problem-solving skills to drive impactful, data-driven projects in a forward-thinking organization.

SKILLS

Programming Languages

Python

Libraries & Tools

Pandas, NumPy, Matplotlib, Scikit-learn, Seaborn, BeautifulSoup, Scrapy, Selenium, Django, MLflow

Databases

MySQL, PostgreSQL, MongoDB

Other Skills

Data Analysis, Machine Learning, Deep Learning, Web Scraping, Data Preprocessing, Model Evaluation, Problem Solving

CERTIFICATIONS

IBM Skillbuild

Data Analysis with Python

EDUCATION

Bachelor of Engineering

Gujarat Technological University
Ahmedabad • 06/2024

WORK EXPERIENCE

Brainy Beam Infotech

08/2026 – Present

ML Engineer • Internship | Ahmedabad

- ML Intern

Saiket System

04/2026 – 05/2026

Machine Learning Engineer Intern | Hybrid

- Design & Develop ML Systems** → Build and optimize machine learning and deep learning models.
- Data Handling** → Collect, clean, preprocess, and analyze structured/unstructured datasets.
- Algorithm Implementation** → Select and apply appropriate ML algorithms (regression, classification, clustering, NLP, etc.).
- Experimentation & Testing** → Run experiments, tune hyperparameters, and validate models.

Internshala

04/2026 – 06/2026

Machine Learning Training Intern | Online

- Completed hands-on training in Machine Learning, including data preprocessing, model building, and evaluation using Python and popular ML libraries.

Codeveda Technology

03/2025 – 04/2025

Python Developer | Ahmedabad

- Design and implement web scraping scripts using BeautifulSoup, Scrapy, and Selenium. Automate data extraction from websites, APIs, and online platforms for analytics and machine learning pipelines. Implement data cleaning and preprocessing workflows to ensure high-quality datasets.

Brainy Beam Technology

01/2024 – 05/2024

Python Fullstack Developer Intern | Ahmedabad

- Build and maintain server-side applications using Python frameworks (Django). Manage databases (MySQL, PostgreSQL, MongoDB) and optimize queries.

PROJECTS

Customer Churn Prediction

Python | Pandas | Scikit-learn | Matplotlib

Built a binary classification model to predict customer churn using historical data. Applied data preprocessing, feature engineering and model evaluation (Accuracy, F1-score).

House Price Prediction

Python | Pandas | Scikit-learn | Seaborn

Developed a regression model to predict house prices based on features like area, location, number of bedrooms, etc. Used data visualization and feature engineering to improve accuracy.

Heart Disease Prediction

Python | Pandas | Scikit-learn | Matplotlib

Implemented a classification model to predict heart disease using patient health data. Performed data cleaning, feature selection and model evaluation.

Diwali Sales Analysis (Python)

Python | Pandas | Matplotlib | Seaborn

Analyzed Diwali sales data to find key trends and customer behavior. Created visualizations for product performance, revenue by location and time-based patterns.
